

Artisan® Siding Corners

299 Series Corners

The **299 Series Artisan® Lap Siding corners** are designed to accentuate the shadow line and thickness of the Artisan® Lap siding. Manufactured with a full wraparound lower lip, these corners require no bottom nail and are easily installed after the Artisan® Lap is hung. Complementing the quality of Artisan® siding, the material used is heavy .019" aluminum, primed and ready for paint on the outside and coated for full protection on the inside. The 299 Series corners are available to fit all Artisan® Lap siding sizes, in both smooth and wood grain textures. To ensure complete coverage of the thick Artisan® siding, the corners are a full 2" wide at the bottom, tapering down to 1-3/8" at the top to create a continuous edge line.

The **299 Series Prefinished Artisan® Lap Siding corners** are available in all of the James Hardie ColorPlus® colors. Colors have been carefully developed and matched for both color and sheen.
