

Inside Siding Corners

392 Series Inside Corners

The 392 Inside corners will provide a cleaner look on inside corners, allowing the shadow line to continue uninterrupted. Manufactured with a right angle flange, these corners come with nail holes for bottom nailing. The outside is primed and ready to paint and coated for full protection on the inside. The corners come in a variety of standard lengths and flange widths to cover most styles of wood siding.

The 399 Inside corners will provide a cleaner look on inside corners, allowing the shadow line to continue uninterrupted. They are manufactured with a full wrap-around lower lip requiring no bottom nail. The outside is primed and ready to paint and coated for full protection on the inside. The corners come in a variety of standard lengths and return lip sizes to fit most available hardboard or cement fiber plank siding.

399 Series Inside Corners

The 399 Inside Prefinished corners are available in all of the James Hardie ColorPlus® colors, and some of the CertainTeed's ColorMax® colors. Colors have been carefully developed and matched for both color and sheen.

Due to the nature of the lip these corners will have a triangular notched opening at the bottom that should be caulked to prevent insect entry.

Corners are specified by the length of the board, not the exposure.
